Instructions

1. Look at the two denominators and find what the first is multiplied by to make the second.
2. Multiply the numerator by that same number.
3. Write it in the box.

Example

① $6 \times \textcircled{4} = 24$

② $2 \times \textcircled{4} = \textcircled{8}$

③ $\frac{2}{6} = \frac{8}{24}$

1 $\frac{1}{2} = \frac{\square}{8}$

2 $\frac{4}{5} = \frac{\square}{10}$

3 $\frac{5}{6} = \frac{\square}{12}$

4 $\frac{2}{4} = \frac{\square}{16}$

5 $\frac{1}{3} = \frac{\square}{15}$

6 $\frac{5}{6} = \frac{\square}{30}$

7 $\frac{1}{6} = \frac{\square}{30}$

8 $\frac{1}{5} = \frac{\square}{25}$

9 $\frac{1}{2} = \frac{\square}{10}$

10 $\frac{4}{6} = \frac{\square}{12}$

11 $\frac{1}{5} = \frac{\square}{15}$

12 $\frac{2}{3} = \frac{\square}{9}$

13 $\frac{2}{3} = \frac{\square}{15}$

14 $\frac{1}{2} = \frac{\square}{4}$

15 $\frac{4}{5} = \frac{\square}{15}$
